*Free yourself
from allergies
without all those
painful shots.*

Suffering with allergies?

Now there's a permanent, pain-free solution.

Instead of painful allergy shots and weekly office visits, you can now get long-term allergy relief simply by putting a few drops under your tongue.

This safe, effective treatment is called *sublingual immunotherapy (SI)*, and it's now available at **ENT Solutions' Pain-free Allergy Clinic** in Blairsville, Georgia at the office of Dr. Wendy L. Smith, ENT.

Pain free.

At your first visit, we learn about your specific allergies by performing a stamp test followed by a simple blood test. Once we've determined what triggers your allergy symptoms, we customize a solution that helps desensitize you to those allergens. No painful shots are involved. You simply put a few drops under your tongue each day.

Hassle free.

Traditional allergy shots require weekly office visits. But with SI, you typically visit our office just twice a year. We teach you how to self-administer your medication and send refills to you by mail.

Symptom free.

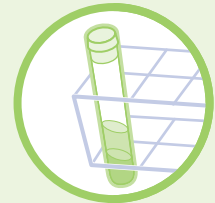

The SI drops desensitize you to allergens. Allergy symptoms typically disappear within six months of treatment eliminating the need for antihistamines, steroid sprays or other allergy medications. Our goal is to make you symptom free for the rest of your life, which takes 3 to 5 years of treatment.

Allergy free!

If you're tired of dealing with sneezing, runny nose, headaches or other allergy symptoms, but you don't want to go through years of painful allergy shots, call Dr. Wendy L. Smith's Allergy Clinic at (706) 745-1305 for an appointment.

4 Steps to Pain-Free Allergy Relief

- 1 A simple blood test** determines what exactly triggers your allergies.

- 2 Customized allergy solution** is sent directly to you by mail.

- 3 You put the allergy drops** under your tongue each day. *(We teach you how.)*

- 4 You'll breath easier** as the drops work to eliminate your symptoms.
